

The electric industry restructuring law, passed in 1997 by the Illinois General Assembly, provides many benefits for all customers. In compliance with this law, electric utilities and suppliers provide an Environmental Disclosure Statement for the 12 months ending every quarter.

The information in this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between January 1, 2012, and December 31, 2012.

In addition to the electricity sources shown on the table and pie chart, ComEd has also procured renewable energy certificates (RECs) each spring since 2008 to fulfill its obligation under the Illinois Renewable Portfolio Standard. A REC represents the beneficial environmental attributes associated with one MWh of renewable generation from resources such as wind, hydroelectric, biomass and solar. In 2012, ComEd procured a total of 4,072,783 RECs in two separate events, one of which is the Annual procurement and the other that covers multiple years – with deliveries starting in June 2013. Roughly 74 percent of these RECS will be from wind generators or solar photovoltaic panels located primarily in Illinois and adjoining states.

Furthermore, near the end of 2010, a Long-term Renewables procurement event was held, with ComEd procuring a total of 1,261,725 Wind and Solar RECs per year for a 20-year period. Deliveries under these Long-term Renewable contracts began June 2012.

Beginning next quarter, the Environmental Disclosure Statement will no longer be provided as a bill insert but will be available through www.ComEd.com.

ComEd Receives U.S. Environmental Protection Agency (EPA) 2013 ENERGY STAR® Partner of the Year Sustained Excellence Award in Energy Efficiency Program Delivery

This is the fifth consecutive year ComEd has been honored for its delivery of its *Smart Ideas* energy efficiency programs through comprehensive customer outreach and education, and marketing programs.

“*Smart Ideas* provides a variety of information, technical and financial resources to customers to help manage their energy budget; but it all rests on a simple commitment to deliver value to our customers,” said Val Jensen, senior vice president, Customer Operations. “ComEd is proud to be recognized by the EPA and thanks our customers for making *Smart Ideas* a successful program.”

ComEd launched its *Smart Ideas* programs in June 2008 to provide customers with easy and accessible energy-efficient ways to manage their electricity usage, save money and help the environment. The programs provide assessment services and incentives to switch to more energy-efficient equipment, from lighting to refrigeration to more complex projects such as industrial improvements. Since the launch of *Smart Ideas*, ComEd has helped customers achieve more than four million megawatt hours of energy savings. This is the equivalent to the energy required to power close to 425,000 homes for one year.

For information on *Smart Ideas* for your home visit ComEd.com/HomeSavings. For business savings visit ComEd.com/SmallBiz.

COMED'S ENVIRONMENTAL DISCLOSURE STATEMENT

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 III Admn. Code 421.

Sources ¹ of Electricity Supplied for the 12 months ending December 31, 2012	Percentage of Total
Biomass power	0%
Coal-fired power	42%
Hydro power	1%
Natural gas-fired power	19%
Nuclear power	35%
Oil-fired power	0%
Solar power	0%
Wind power	2%
Other resources	1%
Unknown resources purchased from other companies	0%
TOTAL	100%

SOURCES OF ELECTRICITY SUPPLIED FOR THE 12 MONTHS ENDING DECEMBER 31, 2012

AVERAGE AMOUNTS OF EMISSIONS ² and AMOUNT OF NUCLEAR WASTE ³ per 1000 kilowatt-hours (kWh) PRODUCED FROM KNOWN SOURCES for the 12 months ending December 31, 2012	
Carbon dioxide	1083.06 lbs.
Nitrogen oxides	0.95 lbs.
Sulfur dioxide	2.38 lbs.
High level nuclear waste	0.006 lbs
Low level nuclear waste	0.0007 cubic feet

¹ These figures constitute the aggregation of information provided by ComEd's wholesale energy suppliers, most of whom have indicated that their source is the "PJM system mix". The PJM system mix is the collective generation produced within the PJM Interconnection, which is the regional transmission organization that maintains the safety, reliability, and security of the transmission system and operates an efficient and effective wholesale electric market in 13 states and the District of Columbia. ComEd's electric service territory is within the PJM footprint.

² The source for the baseline emissions data for the portion of the emissions that are associated with PJM system mix is PJM Environmental Information Services, Inc., (www.pjm-eis.com). For energy that is sourced from the PJM system mix, emissions rates are calculated using the most current emissions data from the PJM System Mix by Fuel Reports. These reports exclude the effects of energy imports, exports, external generation and behind-the-meter generation. Those quarterly reports also exclude the effects of any claims on any specific component(s) of the mix.

³ Nuclear Waste rates were calculated based on Generation Net for Sale and quantities of waste at the nuclear stations that were previously owned by ComEd.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site www.icc.state.il.us.
